

IARC MONOGRAPHS

MALARIA AND SOME POLYOMAVIRUSES (SV40, BK, JC, AND MERKEL CELL VIRUSES)

VOLUME 104

This publication represents the views and expert
opinions of an IARC Working Group on the
Evaluation of Carcinogenic Risks to Humans,
which met in Lyon, 7-14 February 2012

LYON, FRANCE - 2014

IARC MONOGRAPHS
ON THE EVALUATION
OF CARCINOGENIC RISKS
TO HUMANS

International Agency for Research on Cancer

CONTENTS

NOTE TO THE READER	1
LIST OF PARTICIPANTS	3
PREAMBLE.....	9
A. GENERAL PRINCIPLES AND PROCEDURES	9
1. Background.....	9
2. Objective and scope.....	10
3. Selection of agents for review	11
4. Data for the <i>Monographs</i>	11
5. Meeting participants.....	12
6. Working procedures.....	13
B. SCIENTIFIC REVIEW AND EVALUATION.....	14
1. Exposure data	15
2. Studies of cancer in humans	16
3. Studies of cancer in experimental animals.....	20
4. Mechanistic and other relevant data.....	23
5. Summary.....	26
6. Evaluation and rationale.....	27
References	31
GENERAL REMARKS.....	33
MALARIA	41
1. Exposure Data	41
1.1 Taxonomy, structure, and biology of <i>Plasmodium</i>	41
1.2 Epidemiology of <i>Plasmodium</i> infection.....	45
2. Cancer in Humans.....	53
2.1 Burkitt lymphoma	54
2.2 Kaposi sarcoma	72
2.3 Cancers at other sites	74
2.4 Susceptible populations.....	75
3. Cancer in Experimental Animals	75
3.1 Mouse	75
3.2 Rat	77

4. Mechanistic and Other Relevant Data.....	77
4.1 Malaria and the host immune system	77
4.2 Biological properties of <i>P. falciparum</i> antigens relevant to immune dysfunction.....	87
4.3 Other infectious agents associated with falciparum malaria and human cancer.....	91
4.4 <i>Plasmodium</i> infection in experimental animals	97
4.5 Susceptible populations.....	97
4.6 Mechanisms of lymphomagenesis.....	97
5. Summary of Data Reported.....	99
5.1 Exposure Data.....	99
5.2 Human carcinogenicity data	99
5.3 Animal carcinogenicity data	100
5.4 Mechanistic and other relevant data.....	100
6. Evaluation and Rationale.....	101
6.1 Cancer in humans	101
6.2 Cancer in experimental animals	101
6.3 Mechanistic and other relevant data.....	101
6.4 Overall evaluation	101
References	101

INTRODUCTION TO POLYOMAVIRUSES.....121

1. Discovery	121
2. Taxonomy and phylogeny	123
3. Structure of the virion	123
4. Genomic organization, gene products, and replication	124
5. Viral life-cycle	127
6. Host range.....	128
References	128

SIMIAN VIRUS 40.....133

1. Exposure Data	133
1.1 Host range and tissue tropism.....	133
1.2 Methods for the detection of SV40 infection	133
1.3 Epidemiology of infection.....	134
2. Cancer in Humans.....	142
2.1 Prospective studies.....	142
2.2 Case-control studies	153
2.3 Susceptible populations.....	162
2.4 Case series	167
3. Cancer in Experimental Animals	169
3.1 Infection with SV40.....	169
3.2 Infection with SV40 DNA	182
3.3 Transgenic mouse models.....	182
3.4 Carcinogenicity of SV40 in combination with asbestos	190

4. Mechanistic and Other Relevant Data.....	190
4.1 Transforming capacity of SV40.....	190
4.2 Biological properties and regulation of SV40 viral proteins relevant to carcinogenesis	191
4.3 <i>In vivo</i> and <i>in vitro</i> evidence for a role for SV40 in human malignancies	194
4.4 Interaction between SV40 and potential cofactors	198
4.5 Transgenic models for cancers associated with SV40 infection	198
4.6 Susceptible human populations.....	198
4.7 Mechanistic considerations in relation to carcinogenesis.....	199
5. Summary of Data Reported.....	201
5.1 Exposure data.....	201
5.2 Human carcinogenicity data	201
5.3 Animal carcinogenicity data	202
5.4 Mechanistic and other relevant data.....	203
6. Evaluation	203
6.1 Cancer in humans	203
6.2 Cancer in experimental animals	203
6.3 Overall evaluation	203
6.4 Rationale.....	203
References	204
 BK POLYOMAVIRUS.....	 215
1. Exposure Data	215
1.1 Cell and tissue tropism.....	215
1.2 Methods for the detection of BKV.....	215
1.3 Epidemiology of BKV infection	217
2. Cancer in Humans.....	221
2.1 Background.....	222
2.2 Cancer of the prostate	223
2.3 Cancer of the colon	227
2.4 Haematological malignancies	228
2.5 Neuroblastoma	229
2.6 Cancer of the brain	229
2.7 Cancer of the head and neck	229
2.8 Cancer of the bladder.....	230
2.9 Cancer of the ovary.....	230
2.10 Precursors to cancer of the cervix	230
2.11 Cancers of the renal pelvis and kidneys	230
2.12 Cancer risk among patients with polyomavirus-associated nephropathy (PVAN)	231
3. Cancer in Experimental Animals	231
3.1 Hamster	231
3.2 Mouse	240
3.3 Rat	240
3.4 Hamsters injected with BKV DNA.....	241
3.5 Hamsters injected with BKV and c-Ha-ras DNA.....	241
3.6 Transgenic mouse models of BKV T-antigen with natural viral promoter.....	241

4. Mechanistic and Other Relevant Data.....	241
4.1 Transforming capacity of BKV.....	241
4.2 Relevant biological properties of BKV viral proteins.....	243
4.3 Association of BKV with human tumours.....	243
4.4 Transgenic models for cancers associated with BKV infection	246
4.5 Susceptible human populations.....	246
4.6 Mechanistic considerations	247
5. Summary of Data Reported.....	249
5.1 Exposure data	249
5.2 Human carcinogenicity data	249
5.3 Animal carcinogenicity data	250
5.4 Mechanistic and other relevant data.....	250
6. Evaluation	251
6.1 Cancer in humans	251
6.2 Cancer in experimental animals	251
6.3 Overall evaluation	251
References	251

JC POLYOMAVIRUS	261
1. Exposure Data	261
1.1 Cell and tissue tropism.....	261
1.2 Methods for the detection of JCV	261
1.3 Epidemiology of JCV infection.....	262
2. Cancer in Humans.....	265
2.1 Background.....	266
2.2 Cancer of the colorectum.....	266
2.3 Non-Hodgkin lymphoma (NHL)	272
2.4 Cancer of the brain	273
2.5 Cancer of the bladder	274
2.6 Childhood malignancies.....	274
2.7 Other cancers	276
2.8 Intervention studies.....	277
2.9 Susceptible populations.....	281
3. Cancer in Experimental Animals	281
3.1 Monkey	281
3.2 Hamster	281
3.3 Rat	286
3.4 Transgenic mouse models	287
4. Mechanistic and Other Relevant Data.....	289
4.1 Transforming capacity of JCV	289
4.2 Relevant biological properties of JCV viral proteins	289
4.3 <i>In vivo</i> and <i>in vitro</i> evidence for a role of JCV in human malignancies.....	290
4.4 Transgenic models for cancers associated with JCV infection.....	296
4.5 Susceptible human populations.....	296
4.6 Mechanistic considerations	296

5. Summary of Data Reported.....	298
5.1 Exposure data.....	298
5.2 Human carcinogenicity data.....	298
5.3 Animal carcinogenicity data	299
5.4 Mechanistic and other relevant data.....	299
6. Evaluation	300
6.1 Cancer in humans	300
6.2 Cancer in experimental animals	300
6.3 Overall evaluation	300
References	300
MERKEL CELL POLYOMAVIRUS	309
1. Exposure Data	309
1.1 Cell and tissue tropism.....	309
1.2 Methods for the detection of MCV.....	309
1.3 Epidemiology of infection.....	311
1.4 Diseases associated with MCV	314
2. Cancer in Humans.....	314
2.1 Background.....	314
2.2 Case-control studies.....	314
2.3 Case series	318
2.4 Susceptible populations.....	327
3. Cancer in Experimental Animals	327
4. Mechanistic and Other Relevant Data.....	327
4.1 Transforming capacity of MCV.....	327
4.2 Relevant biological properties of MCV-encoded viral proteins	327
4.3 <i>In vivo</i> and <i>in vitro</i> evidence for a role of MCV in human malignancies	329
4.4 Interaction between MCV and other potential cofactors	339
4.5 Susceptible populations.....	339
4.6 Transgenic models for cancers associated with MCV infection.....	340
4.7 Mechanisms of carcinogenesis	340
5. Summary of Data Reported.....	343
5.1 Exposure data.....	343
5.2 Human carcinogenicity data.....	343
5.3 Animal carcinogenicity data	343
5.4 Mechanistic and other relevant data.....	343
6. Evaluation	344
6.1 Cancer in humans	344
6.2 Cancer in experimental animals	344
6.3 Overall evaluation	344
References	344
LIST OF ABBREVIATIONS	351

NOTE TO THE READER

The term ‘carcinogenic risk’ in the *IARC Monographs* series is taken to mean that an agent is capable of causing cancer. The *Monographs* evaluate cancer hazards, despite the historical presence of the word ‘risks’ in the title.

Inclusion of an agent in the *Monographs* does not imply that it is a carcinogen, only that the published data have been examined. Equally, the fact that an agent has not yet been evaluated in a *Monograph* does not mean that it is not carcinogenic. Similarly, identification of cancer sites with *sufficient evidence* or *limited evidence* in humans should not be viewed as precluding the possibility that an agent may cause cancer at other sites.

The evaluations of carcinogenic risk are made by international working groups of independent scientists and are qualitative in nature. No recommendation is given for regulation or legislation.

Anyone who is aware of published data that may alter the evaluation of the carcinogenic risk of an agent to humans is encouraged to make this information available to the Section of IARC Monographs, International Agency for Research on Cancer, 150 cours Albert Thomas, 69372 Lyon Cedex 08, France, in order that the agent may be considered for re-evaluation by a future Working Group.

Although every effort is made to prepare the *Monographs* as accurately as possible, mistakes may occur. Readers are requested to communicate any errors to the Section of IARC Monographs, so that corrections can be reported in future volumes.
